

The Moore Balance Brace

What is the Moore Balance Brace?

The Moore Balance Brace is a lightweight ankle stabilizer that is designed to help improve balance and stability in patients that are at risk for trips and falls. The brace is prescribed bilaterally and because of its design, is able to fit into most shoes.

How Does It Work?

The Moore Balance Brace is the only balance brace clinically proven to reduce postural sway and increase postural stability. A recent research study**, using the Moore Balance Brace along with proper footwear on elderly patients, was shown to **significantly reduce postural sway by 50%**. The brace stabilizes the foot and ankle when weakness and fatigue exist as well as stimulates skin receptors providing feedback to the brain. The sleek device also improves foot clearance which reduces the risk of tripping.
